Algorithms

Algorithms Today

Definition

Why?

Etymology

Founder

Topics

- web: search, caching, crypto
- networking: load balancing, synchronization, routing
- machine learning: data mining, recommendation
- bioinformatics: alignment, matching, clustering
- hardware: design, simulation, verification
- business: allocation, planning, scheduling
- AI: robotics, games, LLMs

Definition

Founder

Topics

Definition

algorithm: a precisely defined set of mathematical or logical operations for the performance of a particular task. -*O.E.D.*

- precisely defined
- mechanical steps
- terminates
- input and related output

Why?

Algorithms

Algorithms Today

Definition

Why?

Etymology

Founder

Topics

- Computer scientist \neq programmer
 - understand program behavior
 - have confidence in results, performance
 - know when to abandon optimality
 - solve ‘impossible’ problems
 - set yourself apart
- CPUs aren’t getting faster
- Software is the differentiator
- Everything requires computation

Muḥammad ibn Mūsā al-Khwārizmī

Algorithms

Algorithms Today

Definition

Why?

Etymology

Founder

Topics

780-850 AD

Born in Uzbekistan, worked in Baghdad

Solution of linear and quadratic equations

Founder of algebra

Popularized arabic numerals, decimal
positional numbers

→ algorism (manipulating digits)

→ algorithm

*The Compendious Book on Calculation by
Completion and Balancing*, 830

Donald E. Knuth

Algorithms

Algorithms Today

Topics

invented algorithm analysis

The Art of Computer Programming, vol 1,
1968

developed $\text{T}_{\text{E}}\text{X}$

literate programming

Topics

- 1 data structures: trees, heaps, union-find
- 2 algorithms: divide-and-conquer, randomized, dynamic programming, greedy, graphs analysis
- 3 theory: time and space complexity, invariants

Not including:

- 1 computability
- 2 **parallel algorithms**
- 3 distributed algorithms
- 4 **numerical algorithms: linear programming**
- 5 geometric algorithms
- 6 on-line or ‘run forever’ algorithms
- 7 **quantum algorithms**
